

Supply Chain security starts with Scarsdale

Protect inventory and movement
with the world's best supply
chain security solutions

Protect supply chain inventory, employees and your company's reputation with Scarsdale Security

The Scarsdale Protective Edge

Protecting your supply chain facilities is a complex challenge that requires expert knowledge and the most innovative and cost-effective physical security and monitored solutions.

Scarsdale is a proven leader in supply chain security with a track record of delivering best in class protection for major retailers, third-party logistic suppliers (3PLs) and independent accounts.

Our system designers will determine the ideal physical security strategy for maximum protection, live monitoring and reporting for new construction, remodels or system upgrades. Your facilities will be secured with the best devices and services, tailored to your needs and budget.

Industry-leading technology backed by live monitoring at Scarsdale Operations Centers

Below are some of the advanced security technology and services available to your supply chain facilities from Scarsdale Security. These systems and services are designed to keep a virtual — and real — eye on inventories, employee access, vehicles, grounds, visitors and more.

- Intrusion detection
- Microwave Fence Detection
- Panic Alarms
- IP and Analog security systems, including remote monitoring, smart analytics, voice down and long-term video retention
- Card Access systems
- Two-way short and long distance radios
- Video Call Box
- Custom security solutions that meet your exact specifications for new or existing construction

Scarsdale Remote Operations Centers

Backing up your physical security is live monitoring from Scarsdale's Remote Operations Centers. Staffed around the clock with the security industry's best team and technology, you may implement standard or premium level monitoring. Reporting and emergency response services include the following:

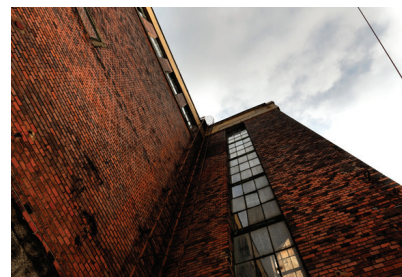

- Real-time video monitoring and response tailored to your security profile
- Video incident review and recording
- Card Access remote monitoring and full system management including card activation/deactivation and system auditing
- Pre-Dispatch Video Alarm Verification

Scarsdale understood everything we needed for warehouse security

This Old Warehouse

"Our old warehouse has decades worth of remodels, back rooms, refrigerated side rooms, old entrances, even a false floor. Scarsdale made sure everything was covered and secure. They even advised us about which of those doors to brick over."

New Construction

"Scarsdale security designers worked closely with our architects and contractors to make sure there were no surprises when we opened for business. The facility has been beautifully updated, including important safety upgrades — and is secure."

Multi-Building Warehouse Remodel

"Our 'warehouse' is actually several buildings, some old and some new, scattered over three townships.

Scarsdale recommended and installed CCTV cameras, security sensors and access control systems at each location. They then brought it all into one monitoring location and even set it up for web monitoring."

On Time. On Budget.

"Scarsdale completed our warehouse project on time and on budget, even after many changes and construction delays. We couldn't be happier."

Scarsdale knows supply chain security

Scarsdale will tailor your security system with the latest sensors, video and live monitoring services. Additional, specialized security services enhance protection for your building, inventory and people:

- **Net Manager**, eliminate the need for an ISP
- **Virtual LP**, Loss Prevention at its best
- **Virtual Guard**, remote video and voice
- **Video Verify**, look in on your building

Call **914-722-2200** or visit www.scarsdalesecurity.com for the highest level of protection for your supply chain facilities. On time and on budget.
